

# SentryBay Personal Data Protection Suite

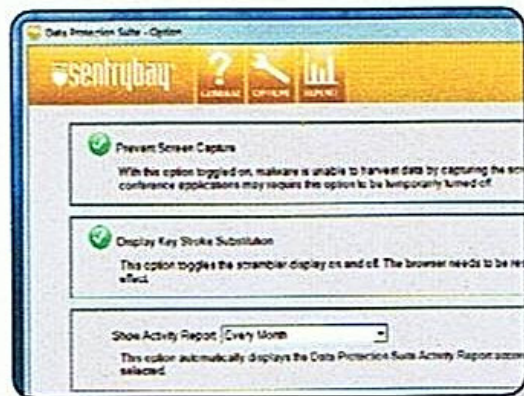

£29.99 (3 PCs, 1 year)

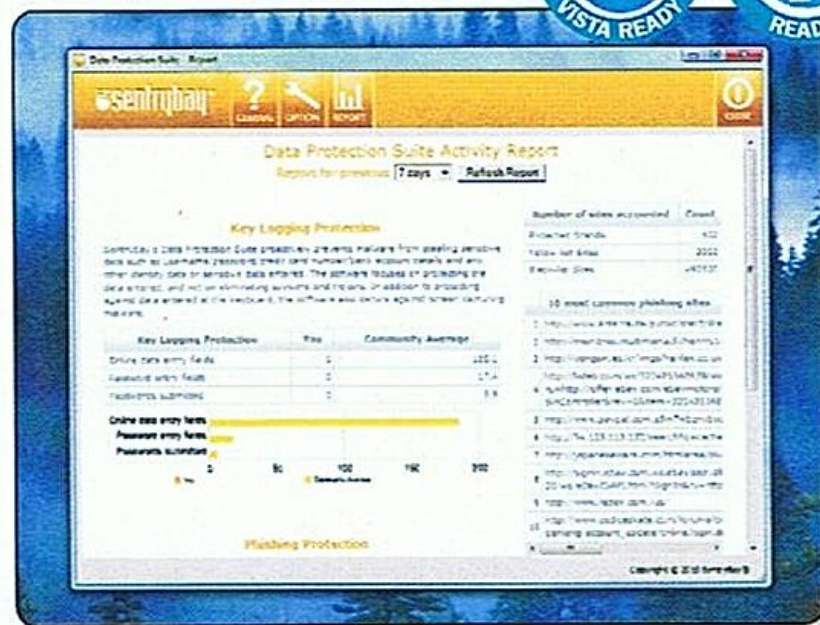

85%

SentryBay PDP Suite tackles the problem of identity theft head-on, scrambling data that you enter into your Web browser, spotting phishing sites that you might be tempted into visiting and staying on guard all the time that Windows is running. It works on top of your existing antivirus and anti-spyware programs, and doesn't aim to actively track down and remove malicious code - instead, it ensures that no program can harvest the information you're entering via your keyboard, giving you peace of mind whenever you're logging into your banking website or filling out another Web form.

Once we had SentryBay PDP Suite up

▲ *The program is also capable of blocking screen capturing tools and warning you when a phishing site is detected*

and running, it ran very discreetly down in the notification area, and there are very few options to speak of. The program just gets on with the job, even going so far as to block any screen capture programs trying to get a grab of your login details. If you want to see what SentryBay PDP Suite is up to, you can view the scrambler at work as it encodes your text if you're using Internet Explorer or Firefox - other browsers support the EntryProtect technology, but not the scrambler.

SentryBay PDP Suite feels like a

▲ *Via the SentryBay Personal Data Protection Suite you can check how many threats are being blocked*

▲ *The built-in scrambler tool will make it impossible for any programs to detect the text you're entering*

lightweight application because it simply installs and works, but it's an invaluable extra layer of protection and we felt much happier having it running in the background on our PC. It doesn't rely on definition files or updates to succeed - it's the digital equivalent of shredding your bank statements and we'd recommend it for the security conscious.
